When Smoke Ran Like Water: Tales Of Environmental Deception And The Battle Against Pollution By Devra Davis

In *When Smoke Ran Like Water*, the world-renowned epidemiologist Devra Davis confronts the public triumphs and private failures of her lifelong battle against environmental pollution. She documents the shocking toll of a public-health disaster-300,000 deaths a year in the U.S. and Europe from the effects of pollution-and asks why we remain silent. For Davis, the issue is personal: Pollution is what killed many in her family and forced some of the others, survivors of the 1948 smog emergency in Donora, Pennsylvania, to live out their lives with impaired health. She describes that episode and also makes startling revelations about how the deaths from the London smog of 1952 were falsely attributed to influenza; how the oil companies and auto manufacturers fought for decades to keep lead in gasoline, while knowing it caused brain damage; and many other battles. *When Smoke Ran Like Water* makes a devastating case for change.

Editorial Review

From Publishers Weekly

Davis, one of the world's leading epidemiologists and researchers on environmentally linked illness, writes about her lifelong battle against environmental pollution in strong prose, underlined with some horrifying stories. With a special emphasis on air pollution and its long-term effects, Davis anecdotally talks about some of the most infamous smogs and fogs of all time, including the Donora Fog (October 26, 1948) that left a small zinc-factory town in Pennsylvania blanketed in a thick, toxic fog for over a week. "Within days, nearly half the town would fall ill" and within one 24-hour period 18 people had died. She argues that these incidents are underreported because the industries responsible for the pollutants are often powerful corporations or the major employer in these small towns. Research into the long-term effects of pollution, such as breast and testicular cancer, reveals that people in the Northeast (including Long Island and Connecticut) and in California have a higher incidence of serious illnesses. Most importantly, Davis brings to the fore the long-lasting effects of growing up and living in a polluted atmosphere, clearly demonstrating that "people living in areas with the dirtiest air had the highest risk of dying." She sounds the warning bell loud and clear: the threat to public health is real. This is an enlightening, engrossing read (with an intro by Gaynor, a leading oncologist at the Weill-Cornell Medical College in New York City), which should be on the shelf of anyone who cares about the environment and wants to learn more about policy, health and politics; Davis weaves all of these together with grace.

From Library Journal

Epidemiologist Davis documents the struggle to force the auto, oil, coal, and chemical industries to come to terms with the environmental consequences of their unregulated release of toxic substances into our air and water--in particular high cancer rates, heart and lung diseases, infertility, brain damage, and death. She sets the stage by describing the perpetual health problems and deaths in her home town of Donora, PA, caused by toxins from coal, steel, and zinc processing. Her accounts of the devastating black smog that blanketed the town for several days in 1948 and other black smogs in Liege, London, and Los Angeles reveal the global nature of the problem. This is an exposé on how industrial polluters deceived the public, belittled scientists and academics, and pressured government agencies to stifle regulations. Davis acknowledges that today's environmental regulations are a tribute to those who fought the polluters and demanded change, but the battle continues. Recommended for all environmental and public health collections; for additional coverage of this issue, see also Gerald Markowitz and David Rosner's *Deceit and Denial: The Deadly Politics of Industrial Pollution* and Sandra Steingraber's *Living Downstream: An Ecologist Looks at Cancer and the Environment*.

From Scientific American

Davis tackles the subject of environmental pollution on two fronts, one personal and one professional. The first contains insight into her own life, starting from her roots in the metalworking town of Donora, Pa.--where the smog from pollution killed 20 outright in October 1948 and had lasting ill effects in townspeople, some fatal, in the months and years that followed. Her vivid descriptions of deadly smog in London as recent as the mid-1950s give the reader perspective about the inherent perils of industrial pollution to the public at large. An epidemiologist by training, Davis also chronicles the growing awareness of the spread of breast cancer (and pollution as a possible cause) in the 1990s, sterility and testicular cancer in men, and the impact of pollution on climate change. Although her prose relies heavily on statistics and historical accounts of

pollution, Davis's personal narrative ties the story together nicely.

From reader reviews:

Adele Rowan:

Do you one of people who can't read enjoyable if the sentence chained inside straightway, hold on guys this particular aren't like that. This *When Smoke Ran Like Water: Tales Of Environmental Deception And The Battle Against Pollution* book is readable by you who hate the perfect word style. You will find the facts here are arrange for enjoyable examining experience without leaving even decrease the knowledge that want to provide to you. The writer connected with *When Smoke Ran Like Water: Tales Of Environmental Deception And The Battle Against Pollution* content conveys the idea easily to understand by most people. The printed and e-book are not different in the articles but it just different such as it. So , do you nevertheless thinking *When Smoke Ran Like Water: Tales Of Environmental Deception And The Battle Against Pollution* is not loveable to be your top listing reading book?

Jorge Raines:

Information is provisions for individuals to get better life, information today can get by anyone at everywhere. The information can be a expertise or any news even a huge concern. What people must be consider while those information which is inside former life are difficult to be find than now could be taking seriously which one is acceptable to believe or which one the actual resource are convinced. If you obtain the unstable resource then you understand it as your main information there will be huge disadvantage for you. All those possibilities will not happen in you if you take *When Smoke Ran Like Water: Tales Of Environmental Deception And The Battle Against Pollution* as the daily resource information.

Anthony Callahan:

Reading a book to be new life style in this year; every people loves to examine a book. When you learn a book you can get a lot of benefit. When you read books, you can improve your knowledge, because book has a lot of information onto it. The information that you will get depend on what types of book that you have read. If you wish to get information about your examine, you can read education books, but if you want to entertain yourself you can read a fiction books, such us novel, comics, along with soon. The *When Smoke Ran Like Water: Tales Of Environmental Deception And The Battle Against Pollution* provide you with new experience in looking at a book.

Andrew Spivey:

On this era which is the greater person or who has ability in doing something more are more precious than other. Do you want to become considered one of it? It is just simple strategy to have that. What you have to do is just spending your time almost no but quite enough to enjoy a look at some books. One of the books in

the top listing in your reading list is usually *When Smoke Ran Like Water: Tales Of Environmental Deception And The Battle Against Pollution*. This book that is certainly qualified as *The Hungry Hills* can get you closer in getting precious person. By looking way up and review this book you can get many advantages.
