**Moon Shot: The Inside Story of America's Apollo Moon Landings** By Jay Barbree, Alan Shepard, Deke Slayton

**A revised edition of the *New York Times* bestselling classic: the epic story of the golden years of American space exploration, told by the men who rode the rockets**

On October 4, 1957, the Soviet Union launched Sputnik I, and the space race was born. Desperate to beat the Russians into space, NASA put together a crew of the nation's most daring test pilots: the seven men who were to lead America to the moon. The first into space was Alan Shepard; the last was Deke Slayton, whose irregular heartbeat kept him grounded until 1975. They spent the 1960s at the forefront of NASA's effort to conquer space, and *Moon Shot* is their inside account of what many call the twentieth century's greatest feat—landing humans on another world.

Collaborating with NBC's veteran space reporter Jay Barbree, Shepard and Slayton narrate in gripping detail the story of America's space exploration from the time of Shepard's first flight until he and eleven others had walked on the moon.

## **Editorial Review**

### **From Library Journal**

Shepard and the late Slayton, two of the original Mercury astronauts, here team up with two veteran space reporters to produce a firsthand account of the space program's early days. The narrative is at its best when it focuses on the astronauts' flight experiences-Shepard's brief Mercury flight, his lunar landing mission ten years later, and Slayton's long-delayed trip into space aboard the last Apollo mission in 1975. On the down side, its use of re-created conversations that pass as exposition weaken the narrative, making it sound more like a screenplay prospectus than a space history. For example, it is doubtful that John Glenn had to explain to his fellow astronauts what the Saturn launch vehicle was. One comes away wishing for more insight into what it was like to walk on the moon and less about the astronauts' pranks and peccadillos. Still, with the book's publication timed to coincide with this July's 25th anniversary of the first manned lunar landing, this title may see some demand.

### **From Booklist**

It's hard to believe, but most teens and people in their early twenties don't remember Americans walking on the moon. This book, written lovingly by two of the most respected astronauts in U.S. history, will remedy that. Journalists Jay Barbree and Howard Benedict organized the material, and they portray Shepard and Slayton as two close friends who shared the dream of many children of the 1960s: to fly in outer space. Sadly, Shepard, after becoming the first American in space in a mere hour's trip, developed inner ear problems that prevented him from going back, and Slayton's irregular heartbeat kept him from going at all. Meanwhile, President Kennedy escalated the space race to get a leg up on the Russians. Despite covering some of the same ground as Tom Wolfe's *The Right Stuff*, Shepard and Slayton vividly portray the great bond uniting the original Mercury Seven. The most terrifying chapter describes the fire on the launchpad that killed three Apollo 1 astronauts, but problems on many flights (unbeknownst to TV viewers) were only solved by the skill of the astronauts as pilots. Shepard and Slayton are emphatic about environmental issues (having seen the Earth from a unique viewpoint), and Shepard's eventual moon shot is only topped by Slayton's emotional reaction to being cleared to fly the Apollo-Soyuz mission to dock with Russian cosmonauts, with whom he became fast friends. Expect much demand. *Joe Collins*

### **From Kirkus Reviews**

The story of America's space race with the Soviet Union and the scramble to put a man on the moon, by two who were there. Shepard and Slayton, both Mercury Seven astronauts, begin with a long, panting account of the Eagle's landing on the moon's surface, then backtrack to the beginning of the superpower missile competition in the late 1940s. They point out that the US at that time had no missile expertise whatsoever; the program was set up in Huntsville, Ala., by Wernher von Braun, the German missile genius captured from the defeated Third Reich. A German team constructed the Redstone and Jupiter rockets, but Eisenhower, who distrusted ex-Nazi scientists, eventually grounded von Braun and his German team--until the Soviets launched a basketball-sized satellite called Sputnik. The American public was traumatized by a 1,000- pound satellite zooming across its airspace, and von Braun got the green light to launch a smaller American satellite at once. After summarizing this early history, the authors turn to the later Apollo missions, which they cover in detail (Slayton was one of the program's masterminds), as well as the eventual Soyuz-Apollo mission, a Soviet-US cooperative effort. Interesting historical material is related in a hard-boiled style, complete with dramatic re-enactments, as if the writing committee--counting the folks who worked on the companion

Turner Broadcasting documentary scheduled for fall, there are at least four authors--had decided they needed swashbuckling prose to enliven the material. Do we really need to be told that the countdown seconds to a missile launch ``fell like withered leaves''? Still, when its corny style doesn't get the better of it, Moon Shot has its moments, and it's quite readable and detailed. (32 pages of b&w photos, not seen) (Author tour) -- *Copyright ©1994, Kirkus Associates, LP. All rights reserved.*

## Users Review

### From reader reviews:

#### Shawn Jones:

The book untitled Moon Shot: The Inside Story of America's Apollo Moon Landings contain a lot of information on this. The writer explains the girl idea with easy way. The language is very clear to see all the people, so do not really worry, you can easy to read it. The book was published by famous author. The author will take you in the new time of literary works. It is possible to read this book because you can read on your smart phone, or program, so you can read the book with anywhere and anytime. In a situation you wish to purchase the e-book, you can open their official web-site and also order it. Have a nice examine.

#### Tanya McGaha:

Many people spending their period by playing outside having friends, fun activity along with family or just watching TV the whole day. You can have new activity to shell out your whole day by reading a book. Ugh, you think reading a book can actually hard because you have to use the book everywhere? It fine you can have the e-book, having everywhere you want in your Mobile phone. Like Moon Shot: The Inside Story of America's Apollo Moon Landings which is getting the e-book version. So , why not try out this book? Let's observe.

#### Donald Lee:

Don't be worry in case you are afraid that this book will certainly filled the space in your house, you may have it in e-book means, more simple and reachable. This specific Moon Shot: The Inside Story of America's Apollo Moon Landings can give you a lot of pals because by you considering this one book you have factor that they don't and make an individual more like an interesting person. This specific book can be one of a step for you to get success. This publication offer you information that maybe your friend doesn't learn, by knowing more than different make you to be great individuals. So , why hesitate? Let's have Moon Shot: The Inside Story of America's Apollo Moon Landings.

#### Matthew Russell:

Guide is one of source of understanding. We can add our information from it. Not only for students and also native or citizen want book to know the up-date information of year for you to year. As we know those guides have many advantages. Beside we add our knowledge, could also bring us to around the world. Through the book Moon Shot: The Inside Story of America's Apollo Moon Landings we can consider more advantage. Don't that you be creative people? To become creative person must love to read a book. Merely

choose the best book that suited with your aim. Don't possibly be doubt to change your life by this book Moon Shot: The Inside Story of America's Apollo Moon Landings. You can more inviting than now.
