## Patterns of Human Growth (Cambridge Studies in Biological and Evolutionary Anthropology) By Barry Bogin

This new, completely revised and updated edition provides a synthesis of the forces that shaped the evolution of the human growth pattern, the biocultural factors that direct its expression, the intrinsic and extrinsic factors that regulate individual development, and the biomathematical approaches that are needed to analyze and interpret human growth. After covering the history, philosophy, and basic biological principles of human development, the book turns to the evolution of the human life cycle. Later chapters explore the physiological, environmental, and cultural reasons for population variation in growth, and the genetic and endocrine factors that regulate individual development, providing a comprehensive explanation for the functional and adaptive significance of human growth patterns. The final chapter integrates all this information into a truly interactive biocultural model of human development.

### **Editorial Review**

#### **Review**

From reviews of the first edition...

"The appealing aspect of this treatise on human growth is the attention given to evolutionary issues."  
Virginia C. Maiorana, Evolutionary Theory

"...perhaps the first genuinely anthropological text on human growth. Written from an evolutionary point of view, the book attempts to place human growth into an ecological and phylogenetic context...a provocative book, bringing an anthropological perspective to a field long practiced by anthropologists." Rebecca Huss-Ashmore, Medical Anthropology Quarterly

### **Users Review**

#### **From reader reviews:**

##### **Marlene Turner:**

Book is usually written, printed, or descriptive for everything. You can understand everything you want by a guide. Book has a different type. We all know that that book is important thing to bring us around the world. Adjacent to that you can your reading expertise was fluently.
