### From the Back Cover

A hands-on guide to the Java programming language, *The Java™ Tutorial, Fourth Edition*, is perfect for any developer looking for a proven path to proficiency with Java SE. Written by members of the Java Software team at Sun Microsystems, this book uses a tested, interactive approach and features real-world problems that help you learn the Java platform by example.

New to this edition are chapters on Generics, Collections, Java Web Start, the Platform Environment, and Regular Expressions. Since the release of the original Java Development Kit in May of 1995, the engineering team at Sun Microsystems has been hard at work improving and enhancing the Java platform. The publication of this edition coincides with the release of Version 6 of the Java Platform Standard Edition (Java SE) and reflects the API of that release.

This edition introduces new features added to the Java platform since the publication of the third edition (under release 1.3), such as a chapter on Generics and information on annotations. There are new chapters on Java Web Start, The Platform Environment, and Regular Expressions. Most chapters, such as Concurrency (formerly Threads), I/O, Object-Oriented Programming Concepts, and Language Basics, have been completely rewritten. Collections has been brought out of the appendix and into its own chapter. A new appendix contains information on how to prepare for the Java Programming Language Certification exam.

All of the material has been thoroughly reviewed by members of engineering to ensure that the information is accurate and up to date.

Like the previous editions, this book is based on the online tutorial hosted at Sun Microsystems' Web site:

<http://java.sun.com/docs/books/tutorial/>

The information in this book is often referred to as "the core tutorial" or "the basics" that are required by most beginning to intermediate programmers. Once you have mastered the material in this book, you can explore the rest of the Java platform on the Web site.

As always, our goal is to create an easy-to-read practical programmer's guide with lots of examples to help people learn to program.

## **Who Should Read This Book?**

This book is geared towards both novice and experienced programmers.

- New programmers can benefit most from reading the book from beginning to end, including the step by step instructions for compiling and running your first program in Getting Started (page 1).
- Programmers experienced with procedural languages such as C++ may wish to start with the material on object-oriented concepts and features of the Java programming language.
- Experienced programmers may want to jump feet first into more advanced topics, such as generics, concurrency, or Java Web Start.

This book contains information to address the learning needs of programmers with various levels of experience.

## **How to Use This Book**

This book is designed so you can read it straight through or skip around from topic to topic. The information is presented in a logical order, and forward references are avoided wherever possible.

The examples in this tutorial are compiled against the 6.0 release. You need to download this release in order to compile and run most examples.

The accompanying CD contains the content of this book (including examples, and solutions and answers to the questions and exercises), as well as the online-only Java SE tutorials, an early 6.0 release of the Java SE Development Kit (JDK), and the corresponding API specification and guide documentation.

You will see footnotes like the following:

<docs/api/java/lang/Class.html>

and

<tutorial/deployment/applet/examples/TalkServer.java>

The highest level of the CD contains `docs` and `tutorial` directories, so those footnotes can be located on the CD as specified. To locate the latest pages online, prepend `http://java.sun.com/javase/6/` to the `docs` footnotes and `http://java.sun.com/docs/books/` to the `tutorial` footnotes:

<http://java.sun.com/javase/6/docs/api/java/lang/Class.html>

<http://java.sun.com/docs/books/tutorial/deployment/applet/examples/TalkServer.java>

The chapters in this book can be found on the CD at the following locations:

Chapter 1. Getting Started: `tutorial/getStarted`

Chapter 2. Object-Oriented Programming Concepts: `tutorial/java/concepts`

Chapter 3. Language Basics: `tutorial/java/nutsandbolts`

Chapter 4. Classes and Objects: `tutorial/java/javaOO`
